Remote Sensing Handbook - Three Volume Set: Remotely Sensed Data Characterization, Classification, and Accuracies

Remote Sensing Handbook - Three Volume Set: Remotely Sensed Data Characterization, Classification, and Accuracies

A volume in the **Remote Sensing Handbook** series, **Remotely Sensed Data Characterization, Classification, and Accuracies** documents the scientific and methodological advances that have taken place during the last 50 years. The other two volumes in the series are *Land Resources Monitoring, Modeling, and Mapping with Remote Sensing*, and *Remote Sensing of Water Resources, Disasters, and Urban Studies*.

This volume demonstrates the experience, utility, methods, and models used in studying a wide array of **remotely sensed data characterization, classification, and accuracies for terrestrial applications**. Leading experts on global geographic coverage, study areas, and array of satellite and sensors contribute to this unique handbook. This theoretical as well as highly practical book represents a thorough history of advancement in the field over last 50 years, bringing us to where we are now, and highlighting future possibilities.

Highlights include:

- Fundamental and advanced topics in remote-sensing satellites and sensors
- Remote sensing data calibration, normalization, harmonization, and synthesis
- Optical, Radar, LiDAR, thermal, hyperspectral, and other satellite sensors, normalization of remotely sensed data, and data degradations
- Digital image processing, urban image classification, and image classification methods in land use/land cover, cropland, change detection studies
- Enhanced vegetation indices and standardization of vegetation indices
- Object-based image analysis (OBIA) and geospatial data integration
- LiDAR data processing and applications
- Geoprocessing, GIS, and GIScience
- GNSS applications
- Crowdsourcing and cloud computing
- Google Earth for Earth Sciences
- Map accuracies
- Remote-sensing law or space law, and a host of other topics

Considered *magnum opus* on the subject, the three-volume *Remote Sensing Handbook* is edited by Dr. Prasad S. Thenkabail of the United States Geological Survey and a renowned international expert in remote sensing and GIScience, with contributions from the very best leading global experts, the handbook gives you a knowledge base on the evolution of remote sensing science, current state-of-the-art technology, and a future vision for the field.

From reader reviews:

Brian Ramos:

Hey guys, do you desire to find a new book to see? Maybe the book with the name Remote Sensing Handbook - Three Volume Set: Remotely Sensed Data Characterization, Classification, and Accuracies suitable to you? Often the book was written by well known writer in this era. Often the book entitled Remote Sensing Handbook - Three Volume Set: Remotely Sensed Data Characterization, Classification, and Accuracies is the one of several books that everyone read now. This kind of book was inspired a lot of people in the world. When you read this publication you will enter the new age that you ever know prior to. The author explained their strategy in the simple way, consequently all of people can easily to recognise the core of this publication. This book will give you a lots of information about this world now. In order to see the represented of the world in this particular book.

Jordan Sena:

Reading a book to be new life style in this year; every people loves to go through a book. When you examine a book you can get a lots of benefit. When you read guides, you can improve your knowledge, since book has a lot of information upon it. The information that you will get depend on what types of book that you have read. If you want to get information about your research, you can read education books, but if you want to entertain yourself read a fiction books, these us novel, comics, as well as soon. The Remote Sensing Handbook - Three Volume Set: Remotely Sensed Data Characterization, Classification, and Accuracies provide you with new experience in examining a book.

Kelsey Palermo:

You will get this Remote Sensing Handbook - Three Volume Set: Remotely Sensed Data Characterization, Classification, and Accuracies by look at the bookstore or Mall. Merely viewing or reviewing it can be your solve issue if you get difficulties to your knowledge. Kinds of this book are various. Not only simply by written or printed but in addition can you enjoy this book by means of e-book. In the modern era including now, you just looking by your mobile phone and searching what your problem. Right now, choose your own ways to get more information about your guide. It is most important to arrange you to ultimately make your knowledge are still revise. Let's try to choose suitable ways for you.

Allen Grimm:

What is your hobby? Have you heard that will question when you got scholars? We believe that that query was given by teacher with their students. Many kinds of hobby, Everybody has different hobby. And you also know that little person just like reading or as reading become their hobby. You should know that reading is very important as well as book as to be the factor. Book is important thing to add you knowledge, except your own teacher or lecturer. You discover good news or update in relation to something by book. Amount types of books that can you go onto be your object. One of them are these claims Remote Sensing Handbook
