Forecasting Financial Markets: Exchange Rates, Interest Rates and Asset Management

Forecasting Financial Markets: Exchange Rates, Interest Rates and Asset Management

Today's financial markets are characterised by a large number of participants, with different appetites for risk, different time horizons, different motivations and reactions to unexpected news. The mathematical techniques and models used in the forecasting of financial markets have therefore grown ever more sophisticated as traders, analysts and investors seek to gain an edge on their competitors. Written by leading international researchers and practitioners, this book focuses on three major themes of today's state of the art financial research: modelling with high frequency data, the information content of volatility markets, and applications of neural networks and genetic algorithms to financial time series. Forecasting Financial Markets includes empirical applications to present the very latest thinking on these complex techniques, including:

- * High frequency exchange rates
- * Intraday volatility
- * Autocorrelation and variance ratio tests
- * Conditional volatility
- * GARCH processes
- * Chaotic systems
- * Nonlinearity
- * Stochastic and EXPAR models
- * Artificial neural networks
- * Genetic algorithms
