Medical Geology: A Regional Synthesis (International Year of Planet Earth)

Medical Geology: A Regional Synthesis (International Year of Planet Earth)

Medical Geology is a rapidly growing field concerned with the relationship between natural geological factors and human and animal health, as well as with improving our understanding of the influence of environmental factors on the geographical distribution of health problems. This book brings together the work of geoscientists and medical/public health researchers, which addresses health problems caused, or exacerbated by geological materials (rocks, minerals, atmospheric dust and water) and processes (including volcanic eruptions and earthquakes). Among the environmental health problems discussed in this book are: exposure to toxic levels of trace essential and non-essential elements such as arsenic and mercury; trace element deficiencies; exposure to natural dusts and to radioactivity; naturally occurring organic compounds in drinking water; volcanic emissions, etc. The text also deals with the many health benefits of geologic materials and processes.

This wide-ranging volume covers issues in medical geology all over the world with each author covering their respective region. It provides examples from different continents as well as a state-of-the-art review of the latest developments in the discipline. The authors are all recognized geoscientific and medical experts working in the field. The book is written for a wide variety of specialists from geologists, geochemists, pathologists and medical doctors to veterinarians and biologists.

Blake Westerman:

Reading a book tends to be new life style in this era globalization. With reading you can get a lot of information that can give you benefit in your life. Using book everyone in this world could share their idea. Textbooks can also inspire a lot of people. A lot of author can inspire all their reader with their story or even their experience. Not only the storyplot that share in the books. But also they write about the data about something that you need example of this. How to get the good score toefl, or how to teach your kids, there are many kinds of book that exist now. The authors these days always try to improve their expertise in writing, they also doing some research before they write to their book. One of them is this Medical Geology: A Regional Synthesis (International Year of Planet Earth).

Barbara Folsom:

As a university student exactly feel bored in order to reading. If their teacher requested them to go to the library or make summary for some e-book, they are complained. Just little students that has reading's soul or real their hobby. They just do what the professor want, like asked to the library. They go to generally there but nothing reading critically. Any students feel that studying is not important, boring and can't see colorful photos on there. Yeah, it is to become complicated. Book is very important for yourself. As we know that on this age, many ways to get whatever we want. Likewise word says, ways to reach Chinese's country. Therefore , this Medical Geology: A Regional Synthesis (International Year of Planet Earth) can make you truly feel more interested to read.
